

Consumer Price Index

2012, June

Inflation slowed down to 2.8 per cent in June

The year-on-year change in consumer prices, i.e. inflation, calculated by Statistics Finland slowed down to 2.8 per cent in June. In May it stood at 3.1 per cent. The rising of prices slowed down above all by fallen interest rates from the year before and fallen liquid fuel prices from May to June.

Inflation indicators in Finland, June 2012

| | Point figure | Change on one year | Change on one month |
|--|--------------|--------------------|---------------------|
| Consumer Price Index 2010=100 | 106,4 | 2,8 % | 0,1 % |
| Cost-of-living Index 1951:10=100 | 1 865 | | |
| Harmonised Index of Consumer Prices 2005=100 | 117,7 | 2,9 % | 0,1 % |
| Harmonised Index of Consumer Prices at Constant Taxes 2005=100 | 116,0 | 2,1 % | 0,1 % |

In June, consumer prices were pushed up most from last year by risen prices of food, transport, housing, alcohol and tobacco. Food prices went up mainly due to increases in the prices of meat, confectionery and ice cream, dairy products and soft drinks. Increases in the vehicle tax and fuel prices in particular put the prices of transport up. Housing prices, in turn, were pushed up most by increases in rents and maintenance charges. Risen prices of restaurant and café services, and risen clothing prices also had an impact on inflation. The rising in consumer prices was curbed most in June by fallen prices of consumer electronics, telecommunication services and electricity from the year before. From May to June consumer prices rose by 0.1 per cent.

Each mid-month, Statistics Finland interviewers collect altogether around 50,000 prices on 483 commodities from approximately 2,700 outlets for the Consumer Price Index. In addition, some 1,000 items of price data are gathered by centralised collection. The Consumer Price Index 2010=100 Handbook for Users is available on the CPI-home page (www.stat.fi).

According to preliminary data, inflation in the euro area was 2.4 per cent in June

According to the preliminary data on the Harmonised Index of Consumer Prices, the rate of inflation in the euro area was in June the same as in May, i.e. 2.4 per cent. The corresponding figure for Finland in June was 2.9 per cent.

The Harmonised Index of Consumer Prices does not include owner-occupancy, games of chance, interests on consumption and other credits, fire insurance on detached houses or vehicle tax. The consumption items included in the Harmonised Index of Consumer Prices as well as the rules governing its compilation have been defined in EU regulations.

Eurostat's estimate of inflation in the euro area is based on preliminary data from the Member States and on the price development of energy. Eurostat will publish detailed data on Harmonised Indices of Consumer Prices for June on 16 July. Information of inflation in EU countries is available on Eurostat homepage, eurostat (http://ec.europa.eu/eurostat).

The year-on-year change in the Harmonised Index of Consumer Prices at Constant Taxes was 2.1 per cent in June

The year-on-year change in the Harmonised Index of Consumer Prices stood at 2.9 per cent in June and that in the Index at Constant Taxes measuring market inflation at 2.1 per cent. Over twelve months, the combined raising impact on consumer prices from changes in commodity tax rates was thus 0.8 percentage points. The month-on-month change in both the Harmonised Index of Consumer Prices and in the Index at Constant Taxes was 0.1 per cent in June. There were no changes in tax rates in June.

Harmonised Index of Consumer Prices at Constant Taxes

The inflation measured by Consumer Price Index consists mainly of products and services priced by enterprises and the public sector, and value added and commodity taxes. Some 25 per cent of the private consumption described by the Harmonised Index of Consumer Prices (HICP) consists of value added or other taxes. The Harmonised Index of Consumer Prices at Constant Taxes (HICP-CT) is based on the HICP so the two indices have the same weight structure and price data. HICP-CT is calculated with a method which holds the tax rate constant relative to the reference period. When tax changes take place, the impact of the tax change on commodity prices is eliminated from HICP-CT. The price impact of the tax changes is obtained by comparing the development of the HICP and HICP-CT.
